#### **DETAILED ACTION**

This Office Action is in response to applicant's amendment filed on 07/28/2005. Claims 1-30 are pending in the action.

### Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 2. Claims 1-20 are rejected under 35 U.S.C. 102(e) as being anticipated by Hekmatpour, Amir, US patent application publication no. 2002/01569292.

As per claim 1, Hekmatpour anticipates a method and system for interface of hardware and software for co-simulation and verification of a system on a chip with feature limitations similarly related to the claimed invention. According to Hekmatpour, the computer implemented method includes steps

Executing a client module configured to simulate behavior of an electronic system ([0037], [0038], [0043]),

Using a remote procedure call (RPC) to transfer process control ([0058]) to a server module that models behavior of a component of the electronic system ([0058]-[0062]),

Controllably advancing simulation time ([0077]), and

Application/Control Number: 09/941,068

Art Unit: 2128

returning process control to the client module after execution of the server module ([0070]-[0077]) for the simulation.

As per claim 2, Hekmatpour anticipates Verilog/PLI module as claimed for design interface and verification processing ([0042]-0050]).

As per claim 3, Hekmatpour anticipated system C module ([0037]-[0050]).

As per claims 3-10, Hekmatpour anticipates the claimed limitations such as network protocol, sever, client, data transport layer, etc. for data communications and interfacing [0050]-[0070].

As per claim 11, Hekmatpour anticipates a method and system for interface of hardware and software for co-simulation and verification of a system on a chip with feature limitations similarly related to the claimed invention. According to Hekmatpour, the computer implemented method includes steps

Executing a client module configured to simulate behavior of an electronic system ([0037], [0038], [0043]),

Using a remote procedure call (RPC) to transfer process control ([0058]) to a server module that models behavior of a component of the electronic system ([0058]-[0062]),

Controllably advancing simulation time ([0077], and

returning process control to the client module after execution of the server module ([0070]-[0077]) for the simulation.

Application/Control Number: 09/941,068

Art Unit: 2128

As per claim 12. Hekmatpour anticipates the client module is a Verilog/PLI module ([0037]-[0043]).

As per claim 13. Hekmatpour anticipates SoC or systemC module as claimed.

As per claims 14-20, Hekmatpour anticipates transport protocol for RPC, network data communication, component simulation, and interface for hardware/software co simulation as claimed.

### Allowable Subject Matter

- Claims 21-30 are allowed over the prior art of record. Following is examiner's 1. statement reason for allowance.
- 2. The claimed invention is a computer implemented method and system with computer readable medium for Executing a Verilog/PLI module server configured to simulate behavior of an electronic system, using a remote procedure call (RPC) to transfer process control to a SystemC module that models behavior of a component of the electronic system, suspending operation of the SystemC module, advancing simulation time by one cycle of a clock signal having a 50% duty cycle, and returning a pointer associated with a return value to the Verilog/PLI module after the execution of the SystemC module.

## Response to Arguments

Applicant's arguments with respect to claims 1-20 have been considered but are moot in view of the new ground(s) of rejection.

Application/Control Number: 09/941,068 Page 5

Art Unit: 2128

#### Conclusion

1. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

- US patent application publication no. 2002/0059054, issued to Bade et al, on
   May 2002
- 2. US patent application publication no. 2002/0170037 A1, issued to Powell, Edward, on Nov. 2002
- 2. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

3. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Thai Q. Phan whose telephone number is 571-272-3783.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Shah, K. can be reached on 571-272-2279. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
